

Instructions

KUM-C Intelligent Ultrasonic Level Meter

Product description

Ultrasonic level meter (measuring material level, liquid level) is a non-contact, high reliability, cost-effective, easy to install and maintain level measuring instrument. It can meet most of the level measurement requirements without contacting the medium. It is a new generation of ultrasonic level meter developed by our company after years of efforts and with completely independent property rights.

Easy debugging

Because the on-site installation environment of the instrument is different. Therefore, the ultrasonic level meter must know the basic conditions required for measurement before working, such as: measurement range, zero point, full range, on-site working conditions, etc. Therefore, the meter must be set before taking measurements.

Technical indicators

Function	Integrated type
Range	5m、10m
Accuracy	0.5%-1.0%
Resolution	3mm/0.1%(Take the larger)
Display	Chinese LCD display
Output	4~20mA(2 wire)
Power	24VDC
Temperature	Display instrument -20~ +60°C, Probe -20~ +80°C
Communication	Optional 485 or 232 communication
Protection level	Display meter IP65, probe IP68
Probe cable	none
Probe installation	According to the selection of measuring range and probe
Probe material	ABS
